Therefore, a lot of scripts exist that allow users to automate their workflows with AutoCAD. Product extensions

Notable AutoCAD extensions include: AutoCAD Architecture, for architectural design; AutoCAD Electrical, for electrical engineering; AutoCAD Civil 3D, for civil engineering; AutoCAD Plant 3D, for civil and architectural plant design; AutoCAD Revit, for building information modeling; VTurbo, for software simulations; AfterCAD for CAD/CAM; AutoCAD Raster Graphics, for raster graphics applications. AutoCAD Architecture is a version of AutoCAD intended for architectural design. AutoCAD Architecture is based on AutoCAD LT and AutoCAD Raster Graphics. For architectural design work, AutoCAD Architecture does not contain a 3D modeling component. The AutoCAD Architecture product family can be downloaded as a standalone product. AutoCAD Architecture is available on Windows, macOS, and Linux. AutoCAD Architecture is also available as a subscription, as part of the AutoCAD subscription. AutoCAD Architecture is compatible with the most recent AutoCAD versions. AutoCAD Architecture has the ability to import and export DWG files, PostScript files, and PDF files. To evaluate the efficacy and safety of whole brain radiotherapy (WBRT) in primary central nervous system lymphoma (PCNSL). From 1993 to 2004, 28 patients with PCNSL, including 17 patients who received single-fraction (SF) WBRT and 11 patients who received multiple-fraction WBRT, were treated with WBRT. A retrospective review was performed. Seventeen patients were treated with single-fraction WBRT and 11 patients were treated with multiple-fraction WBRT. Patient characteristics were as follows: median age, 55 years; male, 16; female, 12; immunocompetent, 21; immunocompromised, seven; B symptoms, 27; elevated LDH, 23; elevated serum lactate dehydrogenase (LDH) levels, 15; extranodal involvement, 21; bulky disease, 14; primary mediastinal disease, 15; CNS infiltration, 20; and multifocal disease, 10. The median total dose of WBRT was 30.6 Gy (range, 20-30.6 Gy). In the SF group, the median total dose was 20 Gy (range, 20-30.6 Gy) and in the multiple-fraction WBRT group, the median total dose was 30 Gy (range, 20-30.6 Gy). The median follow-up period for surviving patients was 37.8 months (range, 4.6-169.1 months). The median survival time was 15 months (range, 7-46 months). The overall survival rate at 6 years was 52.2%. Eighteen patients (64.3%) had disease progression, and 13 patients (46.4%) died of lymphoma or related complications. Radiation-related complications included 5/28 patients (17.9%) with short-term radionecrosis. The overall survival rate for patients with PCNSL was significantly lower than that for the group of other non-Hodgkin lymphomas. The SF regimen of WBRT was as effective as multiple-fraction WBRT. WBRT was safe and resulted in a median survival
