Spain World Champions Windows 7 Theme is a nice collection of images from the event named in the title. The app is very easy to handle, thanks to the intuitive layout and its overall simplicity. There are ten different images in the collection, each depicting the teams that participated in the event, but also several other images, such as the Spanish flag, international pop singer Shakira who sang at the closing ceremony, or Paul the Octopus, the famous "oracle" who guessed 11 out of 13 winners for various matches. The pictures have a high resolution of 1920 x 1200, which means they should fit well on screens of all sizes. The way the images fit to

the screen can be adjusted by choosing one of the available options, such as "Center", "Tile", "Stretch", "Fill" and "Fit". It's even possible to randomize the order in which the wallpapers appear by enabling the "Shuffle" options from the Windows interface. A time delay can also be set for the wallpapers, to values varying from ten seconds and going up to an entire day. All in all, Spain World Champions Windows 7 Theme is a great set of images for those who want to remind themselves of Spain's victory in 2010. Less experienced individuals shouldn't have any troubles with installing and customizing this theme, thanks to the task's overall simplicity. Themes We all know the differences between themes and skins. A theme makes the icons, the background,

the colors of the interface, etc.
The skin is the one with which we
color the individual items that are
part of the interface, such as the
desktop, the icons, the buttons,
the list and the tabs. An important
difference is that you can't really
make changes to the skin of an
existing application, such as it is
possible with themes. This is due
to the fact that the skin is
applied to the whole interface, so
you can change colors, sizes,
sizes, shapes, etc. Perhaps the
most important difference between
the two is that, for the ones who
are interested in tweaking their
desktop, the only way is with
themes. You can't do it if you're
using a skin. However, it's not
that there aren't skins that allow
you to make changes to the icons,
the color of the desktop, the size

of the desktop
