Stone Bridge creator is a professional tool that can generate the correct voxel mesh for any

---

stone pattern you like, and at a level of detail you can control. The Bridge uses the same Bridge voxel mesh engine as 3D Print but can use the Bridge tools to get the perfect results much faster than you will get from manual editing. If you're making a model yourself, it can also be very useful to the understanding of the material and can save a lot of time if you need to create a model yourself. With the Bridge Voxel Creator's ability to pre-program any path into it's

---

tool, you can program the shape of the bridging into any pattern, even if you don't have the pattern modelled in 3D. The bridge voxel tool can also be used for making the perfect full bridge model. For example, you can use the shape of the voxels as a starting point then 'guide' the spares into position and snap it into place. This can be a great way to make some really realistic looking bridges without a tremendous amount of manual editing. The user interface is

---

intuitive enough to be used by beginners while still being powerful enough for the more advanced Bridge users. The process works pretty fast and is a great way of making quick models to show friends and family without having to spend hours modeling it manually. The bridge voxel tool is great for artists as well as 3D modelers. It doesn't just save time, it saves you money and helps you make realistic 3D models, and it only takes 15 mins to get started
