Antideep download v6.30.020.1818 104, M-66, April, 1976.) It has also been recommended that the initial treatment given to the patient after brain trauma should include mannitol, coupled with corticosteroids and anticonvulsants. (Carley, W. O.; Harris, M.; Bower, T. W.; Russo, L.; Grady, C. Neurosurgical Week, 1985; 5(44).) There is also currently much interest in oxygen, and its administration by inhalation. (Saunders, L. H.; Schultz, J. D.; Ota, E. J.; Snyder, J. R.; Olander, R. D. Ann. Surg., 1982; 185:130; Olander, R. D.; Franke, S. P.; McNamara, F. J.; Ota, E. J. J. Neurotrauma, 1984; 1:117; Olander, R. D.; Alhassan, A. A.; Hoffert, J. E.; McClean, W. J.; McNamara, F. J. J. Trauma, 1987; 23:144.) The present invention has as its object the provision of a method of reducing brain edema caused by acute or subacute injuries to the brain which employs hyperbaric oxygen (HBO) administered through a catheter in contact with the brain. The administration of hyperbaric oxygen to a patient suffering from brain injuries is generally considered dangerous, and typically is limited to cases where the patient develops nonreversible neurological or systemic complications. HBO has been administered by a variety of methods, including separate baths, continuous and intermittent pressurization, and a stereotactic frame of reference, to the brain. (Woodley, W. F.; Fisman, L. S.; Fan, H. X.; Shen, Y.; Alme, J. W. J. Neurosurg., 1977; 46:5; Rao, M. B. P.; Krishnamurti, V. A. J.)
