“EA SPORTS are always looking to push the boundaries of what the world can experience in a football simulation,” said Craig Sullivan, Senior Producer, FIFA & FIFA Mobile. “We are thrilled to be introducing the revolutionary HyperMotion Technology and embracing the close-knit and passionate world of FIFA with the next generation of football.” To ensure the most authentic physics-based experience, the team at Visceral Games has re-tuned the game’s basic physics to ensure the best fluid movements on the pitch. Art Director, Andy Serkis, used his experience with motion capture to ensure that FUT 22 had the best physics in the game with more fluid movements and a deeper sense of weight. “The inspiration for HyperMotion comes from the design of the shirt when Andy first saw the subtle movements of Cristiano Ronaldo’s biceps beneath his shirt,” said Serkis. “The goal was to bring this form of movement to an even deeper level.” The additional data used by HyperMotion will bring you closer to the emotions and movements that you experience on the pitch. You will feel the direction of each player’s run and the weight of his tackle, and the most important aspect of this, you will feel how aggressively these movements are executed. On this very specific topic, Serkis said that the feedback will be more accurate for both players and coaches. HyperMotion Technology also introduces innovative formational interactions, which is an emerging trend in gameplay. Formational interaction will change how you’re playing the game. Different formations will require you to switch your tactics in order to keep the ball possession while pressuring opponents. You will also be able to re-adjust your strategy in each moment of the match by pressing the TRIPS button to create or steal the ball. Bringing real-life data to the game is a complicated but exciting task. The development team at Visceral Games has worked extremely hard to capture all aspects of player

movements, from muscle memory to the subtlest of movements. HyperMotion Technology is a perfect example of how powerful football simulation can be when you integrate real-life data. About FIFA FIFA is one of the leading sports video games in the world. Its signature features are the original football dribbling and goalkeeping controls, player likeness and emotion, the free kick, player-controlled substitutions, team play,
