Its main features are: support for Bluetooth, IrDA and Serial Port communication. Microwaves are devices used for generating electromagnetic energy in the microwave frequency range of 300 MHz to 20 GHz, which corresponds to the wavelength range of 10 ?m to 1 mm. There are several different types of microwave ovens. This tutorial will help you setup the Microwave Oven. I hope this tutorial will help you. Microwave Oven Tutorial Introduction to Microwave Oven A microwave is a type of oven which utilizes electromagnetic waves to cause samples of food to cook faster than in conventional ovens. This waveform causes the molecules of food to vibrate, causing them to generate heat. The cooking time for each food depends on how efficiently the molecules in the food can absorb this energy. A microwave oven can heat foods to 250 Celsius or higher, and can thus cook foods that would otherwise need to be baked for several hours or even days to heat. Like the conventional oven, microwaves do not cook evenly. The microwave produces a very specific pattern of waves. The frequency of this pattern of waves is called the microwave frequency. Safety Considerations Microwaves have unique properties which affect the internal body of the microwave oven, its food and food holders, and how it interacts with the outside world. Microwaves are well-known for their ability to cause burns, even if they are very close to the food being cooked. The level of microwaves emitted varies by model. Some models are more powerful than others, and have a lower threshold of hazard. To cook food, microwaves use certain frequencies. The food will absorb some of the microwave energy at those frequencies, and start to vibrate. When a certain amount of the microwave energy is absorbed, the food is cooked. Because the microwave energy is absorbed in a very short period of time, it heats the interior of the food more evenly than cooking over a longer time period. By using a microwave, you can cook food in as little as 1/30th of the time it would take in a regular oven. This tutorial is about using this microwave oven Model no: GV72L. This microwave oven comes with serial numbers and has the options to the option button. Steps to setting up the Microwave Oven 1. Press the Menu button. 2. Use
