What's New In AutoCAD?

The new Markup Import Wizard, which appears as an option in the Markup Assistant, guides you through the process of importing text from other files, including a variety of document types. You can import text directly from a simple text file, a rich text file, an InDesign file, a PDF, or from a Web browser. The new Markup Assist helps you incorporate feedback from printed paper or PDFs into your current project. The Markup Assistant displays suggested modifications while you work, then adds them to your current project. You can even add drawing styles to a text label, label faces, or line symbols. Drawing Assistance: Keep your drawing scales and proportions consistent and easily edit them. The new Drawing Scale Display and Drawing Scale Zoom dialog boxes show you the scale and proportion of your drawing, while you are working on a drawing. The new Drawing Scale Display dialog box (DLG_DRISCL), when set to Manual, displays the scale and proportion of your drawing as you work on a drawing. The new Drawing Scale Zoom dialog box (DLG_DRSZO), when set to Manual, displays a visible scale at the bottom of the window, showing you the scale and proportion of your drawing as you work on a drawing. You can now scale and zoom any part of a model in the Model Properties dialog box (DLG_MODEP). You can now have the View and Zoom dialog boxes show the drawing scale and proportions by default. A drawing may now support up to 64 floating axis. (In previous versions, the maximum was 32.) With the new View Options dialog box (DLG_VIEWOPT), you can easily determine if AutoCAD is trying to display a drawing on a new monitor or to mirror your current monitor. You can now use the new Zoom Editor to edit the parameters of a scale, rotate, pan, and zoom operation. You can now lock the workspace and view of a layer. When the layer is locked, the Layer Properties Manager displays the locked state and shows you which layers are locked or not. You can also select locked layers from the Layer Properties Manager. You can now make a text label visible in the SketchUp

Gallery by selecting it in a text box. You can now also change the font or color of a label face without opening it in a dialog box. You can
