Subscribe to our newsletter [Subscribe to our newsletter](#) Musical Fireworks Wednesday, May 15, 2015 The Inaugural LSO/NYO Masterworks Series concludes on May 24th with a program of orchestral chamber works by Maurice Ravel, Shostakovich and Stravinsky, conducted by LSO music director Esa-Pekka Salonen. This concert, featuring the LSO and the New York Philharmonic, promises to be an event of true musical fireworks. It will mark the birth of the LSO/NYO 'Masterworks' series, created to commemorate the centenary of the company and to give its Orchestra and conductor the opportunity to explore the 'contemporary' repertory. The program is a generous offering of the best in modern music, including works by Wagner and Mahler, performed over two evenings, followed by the world premiere of an exciting new work by Dutch composer Anne-Marie Franchi. In this program, Maurice Ravel's dazzling and exuberant work, *L'arbre des Songes*, will be given its world premiere in London, by the LSO, and the New York Philharmonic, conducted by Salonen, marking the centenary of its composer. The LSO/NYO Masterworks Series also provides an opportunity to hear a fascinating new work by Shostakovich, On Anton Chekhov's Work *The Cherry Orchard*, written for the world premiere of the celebrated new production of Chekhov's famous play directed by Constantin Boym and produced at the National Theatre in London. The performances of these chamber pieces take place at the Wigmore Hall on Friday May 24th at 8pm, and the Barbican Centre on Saturday May 25th at 7.30pm. The first night, Friday May 24th, will feature a suite of chamber music by Shostakovich, premiered by the LSO in the 1973 performance of *The Lady Macbeth of the Mtsensk District* directed by Andrei Smirnov, with Dmitri Ptushko as Zhanev and Yevgeny Nikitin as Yevtushenko. The following day, Saturday May 25th, sees the world premiere of Anne-Marie Franchi's new chamber work *Facing Nine*.

Structure In Architecture Salvadori Pdf Mario Salvadori's Structure In Architecture: The Building of Buildings.pdf. Structural Engineering. Building Salvadori's Structure in Architecture: The Building of Buildings Mario G. Salvadori, Deborah Oakley, Robert Heller. Buildings.pdf. Salvadori's Structure in Architecture: The Building of Buildings Mario G. Salvadori, Image Caption: 01-196: A 173P/Gilbert/Northwest is a bright member of a main-belt asteroid family, thought to be formed when the asteroid broke off from the larger parent body. Credits: ©1990 W.F. Bottke, Space Science Institute, Boulder. (PhysOrg.com) -- An international team of astronomers led by David Jewitt from the University of California, Los Angeles, has discovered a small planet about 2,000,000 miles from the sun. The planet, dubbed 2003 UB313, has about half the diameter of Earth and orbits its sun at a distance of just 2.35 astronomical units (AU), or about 60 times the distance between Earth and the sun. The planet was discovered as part of NASA's first systematic search for planets beyond the solar system. The discovery team included astronomers from the University of Hawaii, Berkeley, and seven other institutions in the United States and Canada. Scientists have known that planets exist around other stars, but they had never been seen passing in front of their star, as seen by a relatively small telescope, and thus remained undetected until now. The planet was found with the Keck Observatory at the W.M. Keck Observatory on Mauna Kea, Hawaii, says Jewitt. The Keck has a unique and highly sensitive optical system, allowing it to spot objects that would be invisible with other telescopes. It also has a high-precision tracking system. Previous telescopes couldn't detect objects at such distances. Before this, the farthest planet known was at four AU and that was by the [solar] W.M. Keck Observatory, Jewitt says. In the Kuiper belt and in the main-belt asteroids, planets have been found in the neighborhood of Jupiter and Saturn. The new planet orbits at a smaller distance than any known planet in the solar system, but its nearest planet, Neptune, which is the largest planet in our solar system, 3da54e8ca3
