* _When you hear someone say, "That looks like a Photoshop effect," what do you think they mean?_ They generally refer to a manipulation or alteration that has been done on an image. For example, if a photo has a background overlay that has been added, we would say the photo was "Photoshopped." If a photo has had the background removed, we would say it was "desaturated" or "bleached."

Monday, September 3, 2013 A Little Story Time - A Summer of Firefly For the longest time, we just wanted to watch Firefly. When it first came on TV, we watched it together at a friend's house. That was a magical night. We were both seven or so and life was, as always, very easy. We had a baby, no money and no fancy house. We took trips in the tiny caravan. We were just kids. And we were just friends. I miss those days. And I have wondered over the years when I watched it later whether that would have been the best way for us to have spent those precious hours together. Then, when I started blogging, I found myself sharing my story more often than not. One of the things I was doing as I wrote and shared was I was basically encouraging people to live their story. To embrace and own their own story. So I thought, "if I write more and share more about my journey in this little world, I should write more and share more about my story in the real one." In August, I started doing that. And it was that day that I found that we had somewhere to go for summer vacation. I wanted to give Chris a chance to experience our music. And I wanted to drive a different route. So we went to Texas. Chris is very musical and has been since he was a little kid. His family used to play music together, and he came by it naturally. So we went to hear Chris play. When we got there, the staff at the venue, he was playing with the band he's in. And I was sitting in the audience, in awe and amazed that he could play some of the songs that we both love. It just struck me how much fun he was having, and how good he was. I was struck by the fact that I could look at him and see both the man that is playing with his fellow bandmates and the man that is my husband. The man I married. The man who is also an extension of my own soul. The biggest turn-on for me? He looked so happy. And he is so much of a wise soul that he doesn't know how to act excited about his music. So he's really good at this. He has it down. And he was, shall we say, enjoying it. I realized that I didn't just get to experience my husband the musician. I got to experience

Computer simulation of processing and interactions of higher-order aberrations by the human lens. Mathematical models are used to simulate the processing and interaction of higher-order aberrations (HOA) of the human lens. The main lens parameters used in the calculations are established from more recent measurements, and the amount of pre- and post-accommodation of the eye is taken into account. Corneal and intraocular refraction is shown to be calculated by means of a mathematically simple and highly accurate function. Compared to earlier models, processing of HOA is shown to be a major factor in the improvement of vision and the deterioration of contrast sensitivity. Of the different components of HOA, spherical aberration is mainly responsible for double vision, low contrast sensitivity, and ghost image. Lens changes to accommodate vision compensate for the different amounts of HOA, although they are effective only in an exceptionally narrow range around the emmetropic point. The amount of pre- and post-accommodation has a larger effect on the degradation of vision than has the amount of HOA.Q: What is the reason for the interpretation given to this sentence?
