There are a variety of other files you'll need, such as the ones mentioned on the website.. simulation games, shareware, shareware serials, shareware crack licenses. Normally, the crack-like utilities are offered in password-protected archives and. pack file (rp3wrp). Is this for WISHA TV. I do have a serial number, but it is apparently not the same number of digits I have with other machines. I did download a crack file and it said it could not install the software. what do I do? UPDATE: As a suggestion, maybe you can take a look at some of the other FMTT items for sale and see if a freebie is in your budget or not?Q: Is there a way to temporarily disable attribute rails-5 I have made a model with a boolean attribute set to true, and I need to test that it doesn't do anything. class Test false def enabled? return false end end I've read I can do this with can can, but not sure if this is the right way to go or not and not sure about the accepted way to disable attribute in Rails. Can I just set it to false? I do not need the attribute or the boolean attribute on the model. A: A quicker solution without having to specify model names (Using schema.rb file) is the following: def enable? !(self.enabled &&!self.save) end But the next logic will make a migration and be executed on every change on the attributes: validates :enabled, :presence => false Here you are trying to validate an attribute of a model that is not defined. If you do not need an attribute, use the new index.html.erb template: # Your code More info here Q: MacVim and Command line apps I'm using MacVim to edit documents on a command line. I hate it because I have to manually resize the window each time I edit a large document. I'd like to stop the window from shrinking if it goes above a certain size. When I have a command line Mac
