

## Dogovor Za Sorabotka.pdf

A: You could use the System.IO.Packaging.Package class to read the file and create your own file-system. Using the regular.NET library for creating the zip-archive is rather simple, what you have to do is just to follow the methods which are part of the ZipArchive class. The method you are looking for is ZipArchive.CreateEntry and it has also an overload which takes a byte array as argument and this is what you have to do to create a file and add it to the archive. private void AddFileToArchive(string inArchive, string inFile) { using (FileStream filestream = new FileStream(inFile, FileMode.Create, FileAccess.Write)) { using (ZipArchive archive = new ZipArchive(filestream)) { archive.CreateEntry(inArchive + "\" + inFile.Replace(\".pdf\", \"\") + \".pdf\", CompressionLevel.Optimal); } } } private void fileUploader() { if (FileUpload1.HasFile) { string filePath = FileUpload1.PostedFile.FileName; string fileNameWithoutExtension = Path.GetFileNameWithoutExtension(filePath); string filePathForZip = Server.MapPath("~/PdfFiles/"); string fileNameForZip = Path.Combine(filePathForZip, fileNameWithoutExtension); File.Move(FileUpload1.PostedFile.InputStream, filePathForZip); FileStream fs = new FileStream(fileNameForZip, FileMode.Create, FileAccess.Write); ZipArchive.CreateEntry(fileNameForZip, CompressionLevel.Optimal); List filePathsInZip = Directory.GetFiles(filePathForZip, \"\*. 6d1f23a050
