Once your roughs and layouts are finished, it's time to polish. That means adding finishing touches via paint tools, adjustments, layer masking, adjustment layers and blend modes, adjustment layers/layers, gradients, textures, filters, and 3D effects. These elements can add shine, a color balance, and depth to your layers. Some of these are easier with keyboard shortcuts: For instance, you can use the Shift-Delete shortcut to delete text in a layer—simpler than the Control-E option. One of the most popular features is the Content Aware Move tool. Not only does it let you drag an image with ease, but it will also adapt to scale your objects. If you have areas that vary in color or brushings, the Content-Aware Move tool will remove unwanted parts, copy out those parts, and paste them into another area of the photo. Previews in the Lightroom application just became — even better than they were in the previous version — far more efficient. Previews, as they existed before the update, were simply a tool for browsing your catalog. Lightroom now indicates that the image you are looking at in the web browser is for editing and then makes that browser your active Web browser or it displays the image in a new tab within a different browser window by itself to let you work on it. Unsurprisingly, I am now using the web browser in the iPad Pro's 12.9" 2019 model as my primary working application. As with the Lightroom application, I think the iPad Pro is a far more useful tool for editing than for just browsing. To that end, I still prefer the Apple Pencil over the ProMotion on the 10.5" iPad Pro as well, although that may change when the 2019 iPad Pro arrives or when Apple finally produces an Apple Pencil with a Lightning connector. Worse for Adobe is the fact Apple has no plans to provide it with developer access to the Apple Pencil so it

doesn't have that kind of functionality as it does with the 3rd-party stylus.

Yes! Many professional photographers shoot RAW even from digital point and shoots, and file sizes may be as large as you desire. When exporting, keep in mind that RAW files are usually two or three times larger than a JPEG file. If you try exporting as a JPEG, you may find that it looks grainy and soft. Some RAW files are even larger than you might expect. Most RAW files are smaller than the JPEG files produced by most digital devices and are only barely larger than a JPEG file. RAW images will be easier to edit and print into 8x10's and 11x14s using Photoshop or other programs. Today our top mobile phones come with three essential components: a camera, a display and a battery. But for most of us, the most valuable part is a camera on our phones. We are now experiencing a golden age of digital photography. Consumers have access to cheap, easy-to-use cameras; all you need is a device that can pair with your phone and you can instantly start editing and sharing photos and videos. I'm sure this topic is covered elsewhere, but the studio behind the popular mobile application Lightroom has lent its app support to help users edit 3D files on the desktop. The app can, of course, work with ordinary photos and video. It's great for folks who want a bigger, local storage option for their images. If you need more editing options than those apps offer, Lightroom can act as a workstation on its own, with real-time previews direct from the hardware, while the desktop application opens its optimized viewing platform. Head over to the Darkroom blog for details. Google's
