Android users have long wanted Photoshop on their phones, and now Adobe has finally delivered with Photoshop Touch. It's designed to work with a variety of Android devices, and can be used to edit, create and share digital images (including art, photos, and videos) and graphics. And like the Android apps before it, it is not a full-blown (or even really a premium) Photoshop app, but it does contain plenty of the most popular Photoshop features, such as Content-Aware Fill and Adjustment Layers. Best of all, it runs on the free and open-source Android software used in all smartphones (on which you are reading this article). The tool itself is styled like the Photoshop desktop app, with a large canvas, full-color image editing spaces, and a rotating radial menu, but it operates much in the same way. You can create and edit new compositions, and adjust existing layers by changing their opacity, color or blending mode. Working in the mobile app is a breeze. Camera Raw (formerly Adobe Camera Raw) is the cornerstone of the new camera-friendly presets for the line of Photoshop . And it's not just a face-lift like the Photoshop update last year, but it has actually now become more powerful. Besides the redesigned interface, Camera Raw added even more powerful tools and workflows. Highlights include a new Gaussian Blur tool, targeted adjustments, new overprints, as well as deeper layer styles for layer masks, paths, and masks. And by bringing the powerful editing tools in its desktop version to mobile, the app is a lot more powerful. You can now edit layers, sublayers and adjustment layers, create opacity masks, use adjustment layers, apply complex corrections (such as removing red eyes), merge layers and much more.

"Users need access to the power and features of Photoshop across any device," said David Wadhwaney, senior director of Photoshop at Creative Cloud and Adobe Max. "In the future, it will only be able to get smarter--so we need to believe that the future is now with a native feel on devices, and end-to-end collaboration for those who work with Photoshop. Share for Review and our new collaborative editing features take that a step further, enabling people to take a work product from idea to reality without leaving the familiar editing environment of Photoshop." Share for Review is an innovative new feature available in Adobe Photoshop (CS6) and Photoshop Elements (CS5), which allows any user to be part of a collaborative creative process in Photoshop without ever leaving the editing

environment. The new collaborative features in Adobe Photoshop expand the power of the way people collaborate online and on a single device. All the tools required to collaboratively edit, review, and finalize a project surface as one digital canvas. This is made possible with new Adobe Sensei features like Adobe Sensei Webcam, Adobe Sensei Inking tools, and Adobe Sensei Clipping Path, which enable Photoshop to recognize objects in a single image and complete the editing workflow effectively. Image editing in a browser is an incredible new feature. Users can edit existing images from a dark web page, from the Adobe Creative Cloud Gallery, from within their social network, or from on their mobile device. With a simpler design, a logical experience, and a more visually sophisticated user interface, and with a shift to native GPU technology, users can now edit with the speed and precision that only Photoshop is capable of. They can even swap out a raw image with another image, giving them more control and more options to deliver greater impact. Rich previews of a previously-edited image can be seen side-by-side with the version being edited. This also lets users better preview and edit other image attributes, including Clipping Path and Layer Mask.
