Photoshop Express, another new feature, is a web-based editing interface that allows you to modify, tag, and share photos online. I use it all the time as a quick way to pull photos from Flickr and Tumblr. Definitely check this out if you don't know Photoshop well. Overall, Lightroom is getting so good that I feel that it's hard to justify the cost of Photoshop. Even though Lightroom is \$250, there are already enough features that can be unlocked and enabled without paying the \$700 for the previous Creative Cloud version. For example, you can render images using Adobe Catalyst. It's not available on Creative Cloud and costs a separate digital copy of Photoshop. So if you only need Lightroom's basic features, the cost is well under \$90 per year, plus you could streamline images, prepare and deliver prints, and even sync images to mobile devices. What I do with Photoshop is in its own universe. I can't use Lightroom for my specialized purposes, so Photoshop is the consistent tool for these tasks. Most of the time, I use Photoshop to straighten and correct my images prior to encoding them with the Kodak EZ2S Professional Picture Printer. When I render my images, I usually use Photoshop's "Elements" render engine. Admittedly, the default image quality is a little too soft for printing, but I often want to use a finer-quality setting for rendering. The default setting is fine for most business-oriented printing, while a "Low" setting will satisfy many more demanding clients. If I have all of my images set to a specific quality level, I can quickly switch between multiple presets just by using the "A" button.

If you prefer more of a hands-on experience, download Adobe Photoshop and adjust the colors of a simple Lockup Image to your liking. Next, drag the image onto this page and the Lockup Image will become the current image in the browser. Change any color using the tools in the palette and see immediate changes in your Lockup Image. You can also start with a blank canvas and create and edit simple geometric shapes. If you like, use the Rube Goldberg Machine to create a stop-motion animation, or you can explore more creative options with the Emoji Pencil or the Color Flamingo . Adobe Creative Software set out to reinvent the way consumers could work with creative tools and content. Perhaps no development in digital media has had a bigger impact on how consumers create, share, and consume visual content than Photoshop. Photographers' feedback kept us on track, helping drive the team in new directions. **Our vision:** *Infuse the web with Layered Photoshop*, leveraging innovative technologies to surpass real-time performance and push the envelope of what's possible in the browser. Our vision was to build a tool for all people, that, not unlike Photoshop, empowers creatives to better express their individual visions and achieve their creative aspirations in ways that wouldn't have been possible in the past. **What it means for designers and consumers:** The Browser-as-a-Platform idea is to empower everyone—users, designers, developers—to access and edit content regardless of what device they use. We think this is an important step in the future of content creation, and one that we're very excited to share with the web community. e3d0a04c9c
